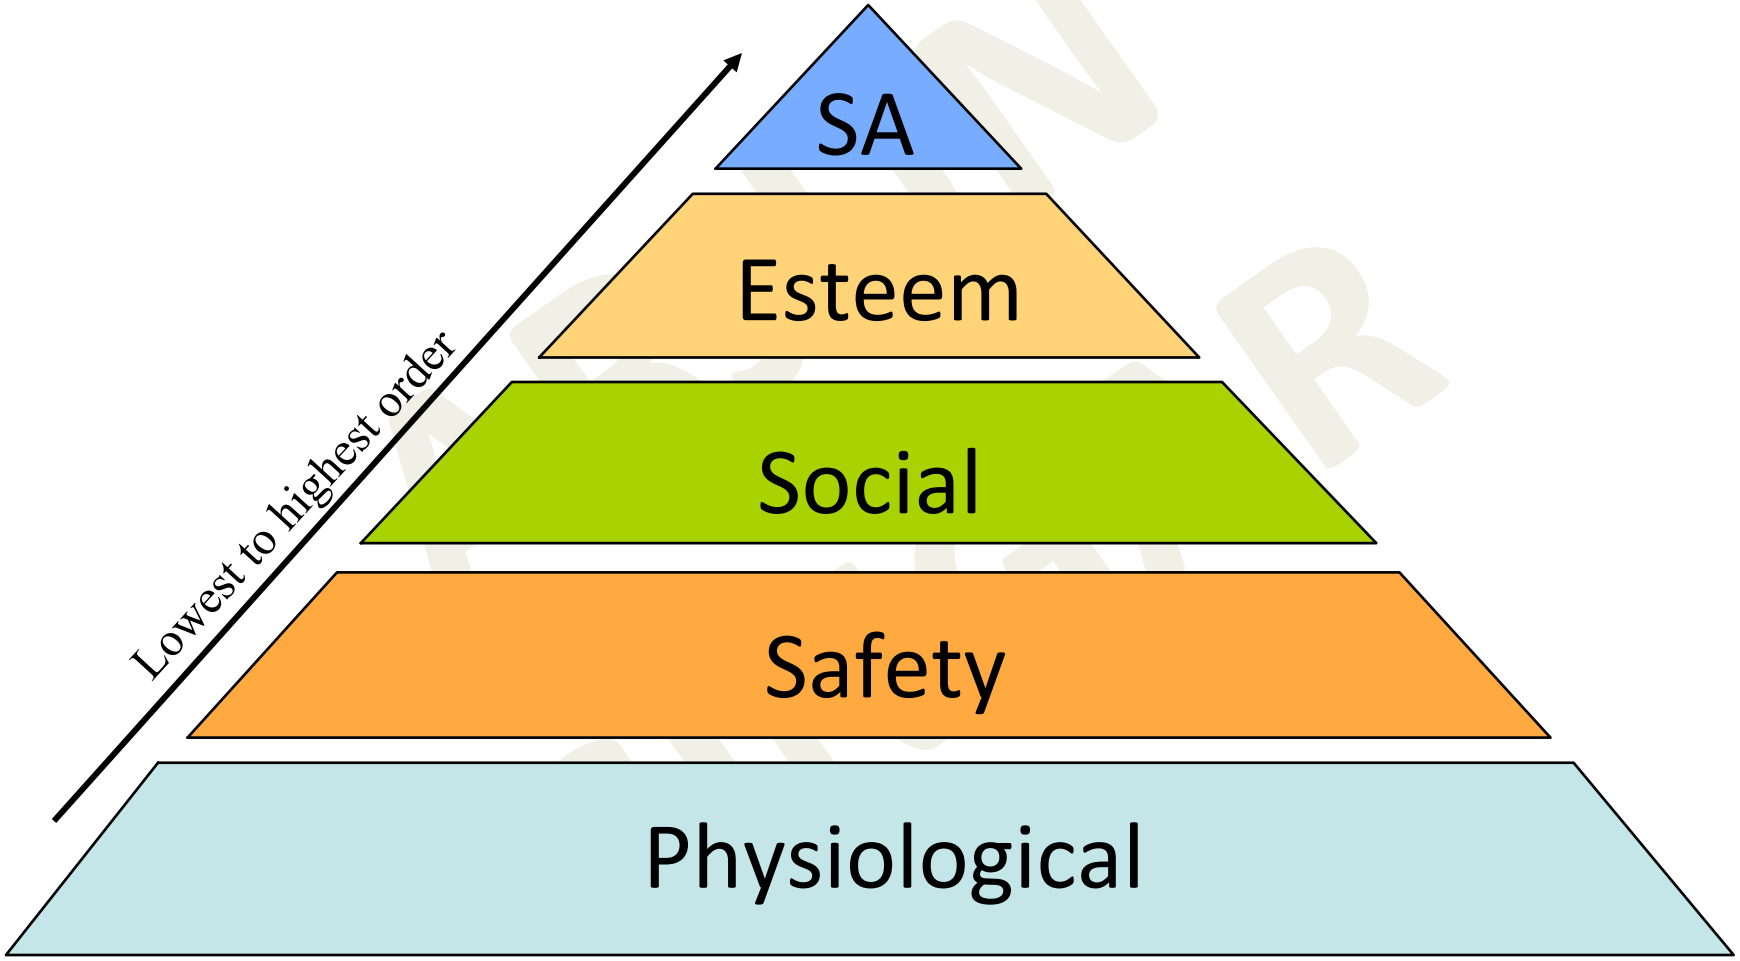
Motivation

- The process by which a person's efforts are energized (intensity), directed and sustained (persistence) toward attaining a goal.
- The willingness to exert high levels of effort to reach organizational goals, conditioned by the effort's ability to satisfy some individual need.
- There are two types of theories – Content (Early Theories) and Process (Contemporary Theories).
- Content theory is based on human needs and Process theory assumes behavior is determined by expected outcomes.

ARJUN SINGAR

Content Theories: Maslow's Hierarchy of Needs



Maslow's Hierarchy of Needs

- Physiological Needs: Air, water, food, shelter & sexual satisfaction.
- Safety Needs: Security and protection from physical & emotional harm.
- Social Needs: Affection, belongingness & acceptance.
- Esteem Needs: Internal factors like Self respect, Autonomy & Achievement and External factors like Status, Attention & Recognition.
- Self Actualization Needs: The desire to become everything one is capable of becoming.

McGregor's Theory X & Theory Y

- McGregor identified two different sets of assumptions about employees.

Theory X

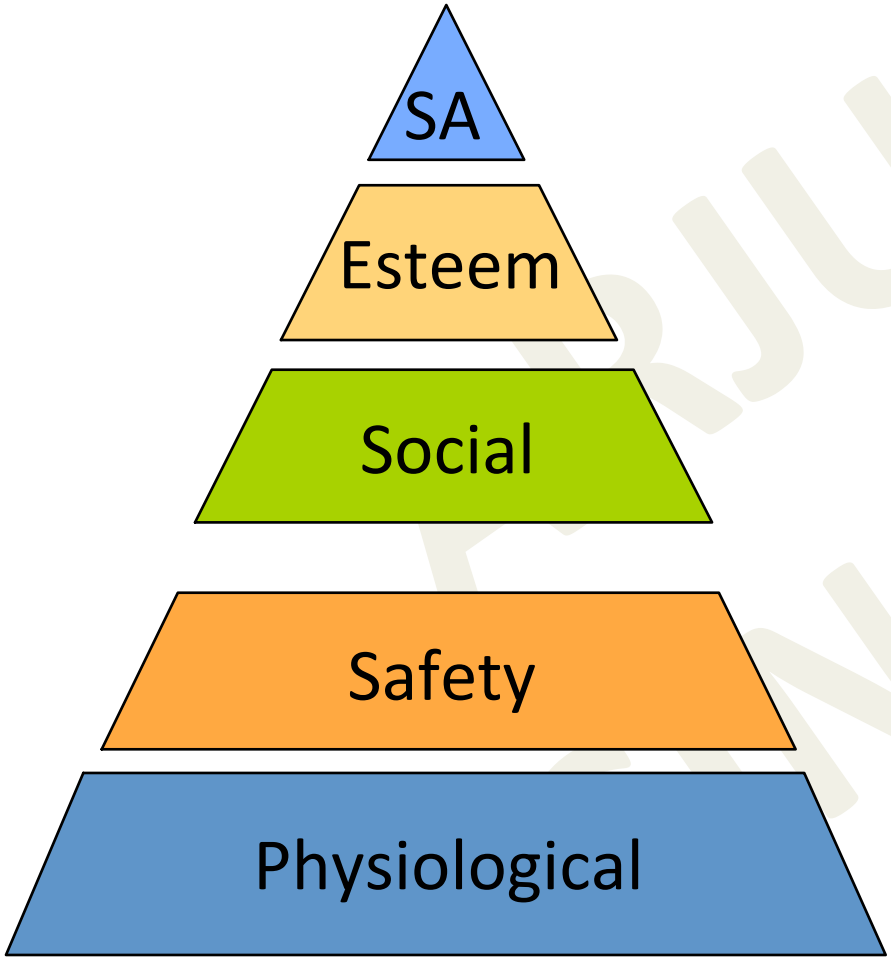
- People have an inherent dislike of work.
- Work is of secondary importance and managers must push employees to work.

Theory Y

- Work is as natural as play or rest.
- People derive a great deal of satisfaction from work.
- People have the capacity to accept, even seek responsibility and can exercise self direction.

ARJUN SINGAR

McGregor's Theory X and Theory Y



Theory Y - a set of assumptions of how to manage individuals motivated by higher order needs

Theory X - a set of assumptions of how to manage individuals motivated by lower order needs

ARJUN SINGAR

Comparison of Assumptions

Factor	Theory X Assumptions	Theory Y Assumptions
Employee attitude towards work	Employees dislike work and will avoid it if at all possible.	Employees enjoy work and will actively seek it.
Management view of direction	Employees must be directed, coerced, controlled, or threatened to get them to put forth adequate effort.	Employees are self-motivated and self-directed toward achieving organizational goals.
Employee view of direction	Employees wish to avoid responsibility; they prefer to be directed and told what to do and how to do it.	Employees seek responsibility; they wish to use their creativity, imagination, and ingenuity in performing their jobs.
Management style	Authoritarian style of management	Participatory style of management

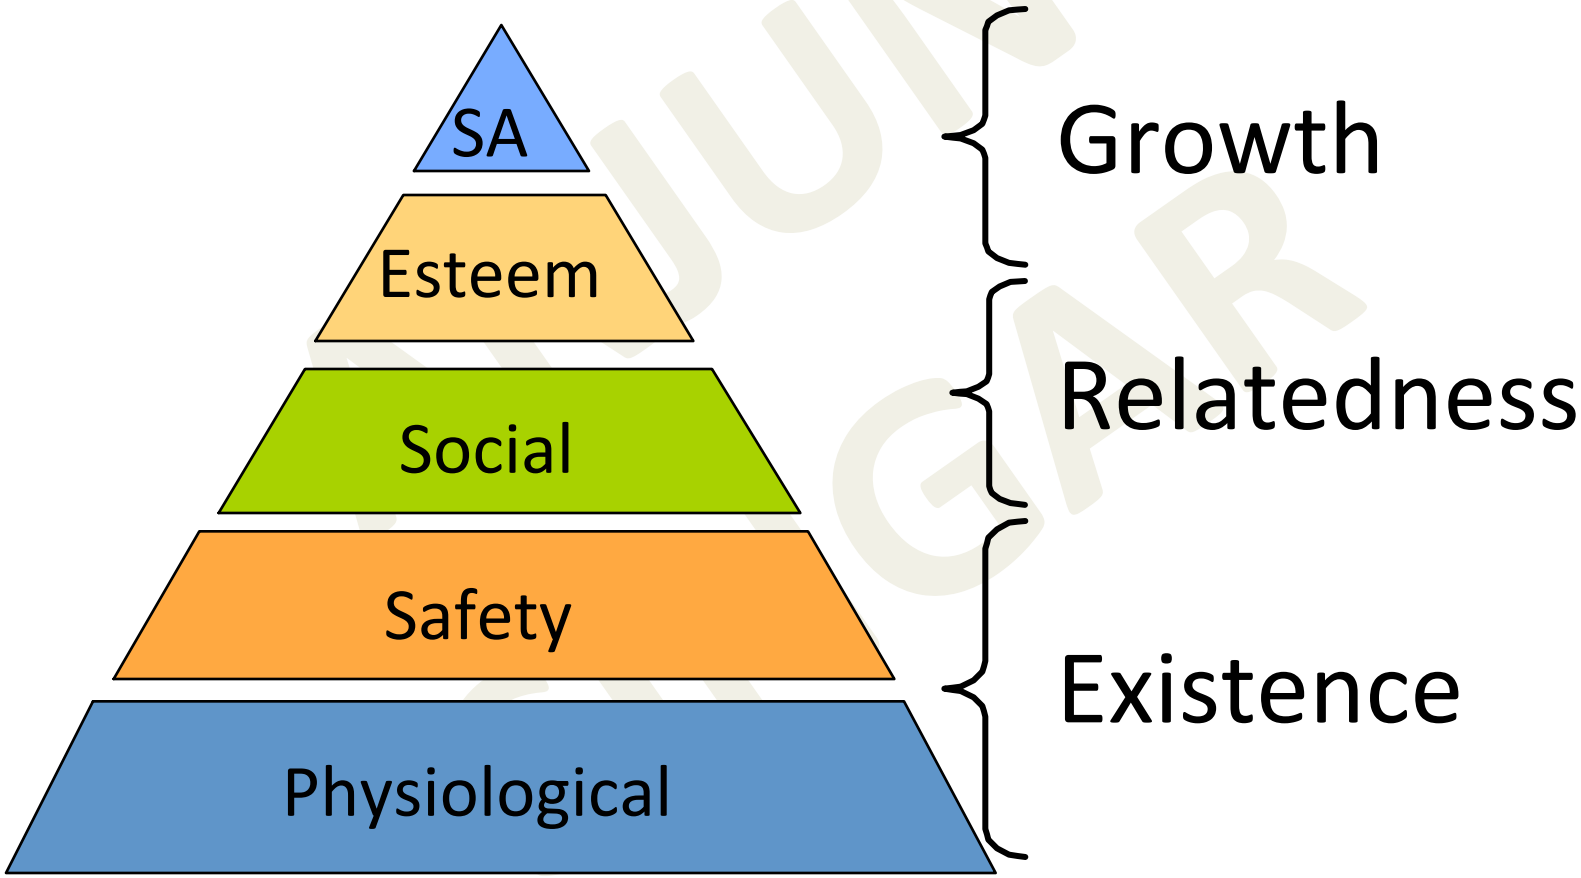
Alderfer's ERG Theory



McClelland's Need Theory

Need for Achievement (nAch) – This is the need for challenge, for personal accomplishment and success in competitive situations. A person with a high need for achievement has three distinct characteristics like personal responsibility, feedback and moderate risk.

Need for Power (nPow) – This is the need to dominate, influence and control people. The people with a high need for power look for position of leadership. They like to set goals, make decision and direct the activities.

Need for Affiliation (nAff) - A need that concerns an individual to establish and maintain warm, close & intimate relationships with other people.

Herzberg's Two Factor Theory

From research, Herzberg concluded that job dissatisfaction and job satisfaction arose from two separate sets of factors (Hygiene & Motivation).

- **Dissatisfiers (hygiene factors)** included salary, working conditions, and company policy – all of which affected the context in which work was conducted. Positive ratings for these factors did not lead to job satisfaction but merely to the absence of dissatisfaction. (Ex: Extrinsic - Employee's feelings)
- **Satisfiers (motivating factors)** include achievement, recognition, responsibility, and advancement – all related to the job content and the rewards of work performance. Positive ratings for these factors lead to job satisfaction. (Ex: Intrinsic - Job enrichment)

Motivation-Hygiene Theory

- Company policy & administration
- Supervision
- Interpersonal relations
- Working conditions
- Salary
- Status
- Security

Hygiene factors avoid job dissatisfaction

Motivation factors increase job satisfaction

- Achievement
- Achievement recognition
- Work itself
- Responsibility
- Advancement
- Growth

Dissatisfaction

Process Theories: Adam's Equity Theory

- Equity theory is based on the assumption that a major factor in job motivation is the individual's evaluation of the equity or fairness of the reward received.
- Equity can be defined as a ratio between the individual's job inputs (such as effort or skill) and job rewards (such as pay or promotion).
- According to equity theory, individuals are motivated when they experience satisfaction with what they receive from an effort in proportion to the effort they apply.

ARJUN SINGAR

Adam's Equity Theory

- People judge the equity of their rewards by comparing them either to the rewards others are receiving for similar input or to some other effort/reward ratio that occurs to them.

Ratio Comparison	Perception
O/I a < O/I b	Under-rewarded (Equity Tension)
O/I a = O/I b	Equity
O/I a > O/I b	Over-rewarded (Equity Tension)

Victor Vroom's Expectancy Theory

- Expectancy theory argues that the strength of a tendency to act in a certain way depends on the strength of an expectation that the act will be followed by a given outcome and on the attractiveness of that outcome to the individual.

  The theory focuses on three components and relationships:

  Components

- **Expectancy:** Belief that effort leads to performance.
- **Instrumentality:** Belief that performance is related to rewards.
- **Valence:** Value or importance placed on a particular reward.

ARJUN SINGAR

Victor Vroom's Expectancy Theory

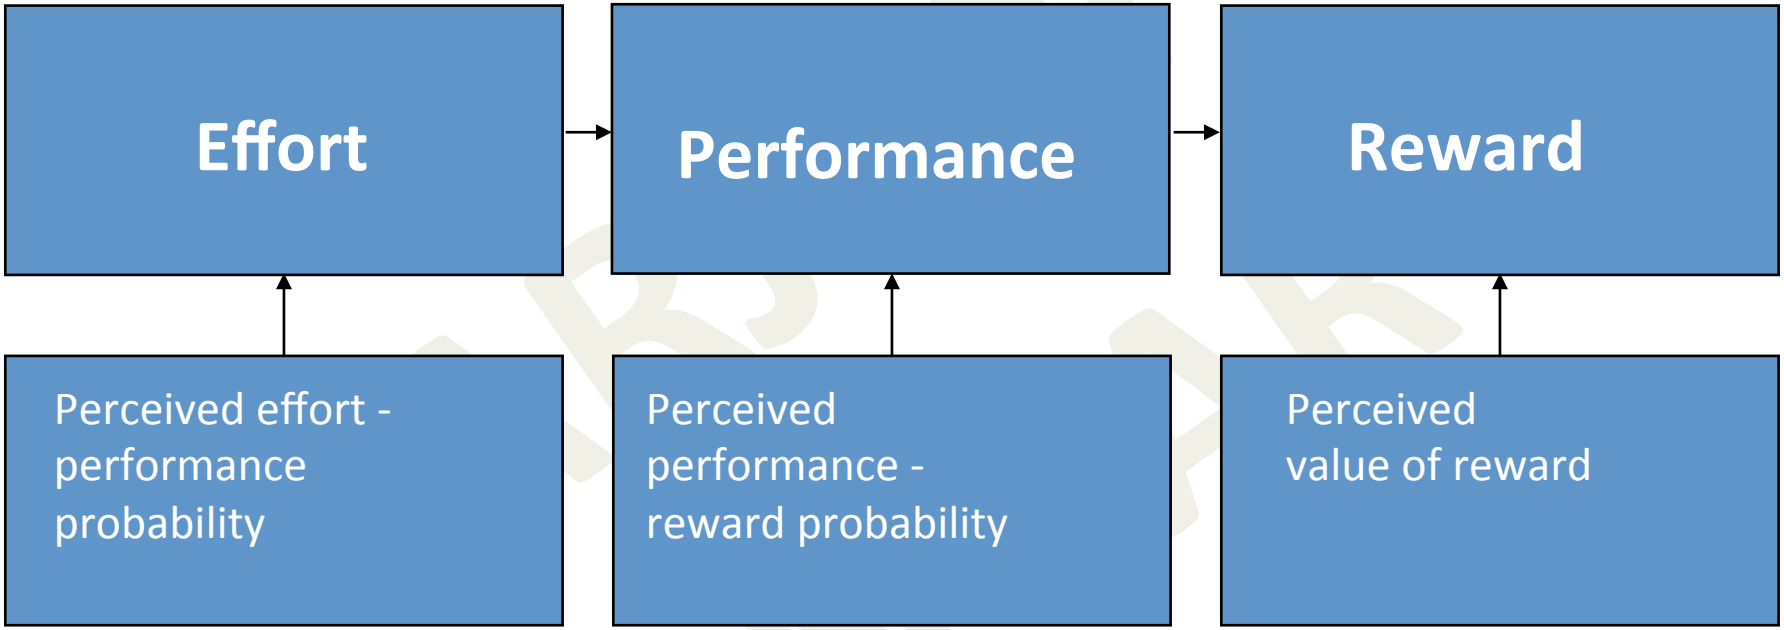
Relationships

- **Effort-performance relationship:** The probability perceived by the individual that exerting a given amount of effort will lead to performance.
- **Performance-reward relationship:** The degree to which the individual believes that performing at a particular level he or she will attain the desired outcome or expectations of his employer.
- **Rewards-personal goals relationship:** The degree to which organizational rewards satisfy individual personal goals or needs and the attractiveness is of those potential rewards for the individual.

ARJUN SINGAR

Victor Vroom's Expectancy Theory

Expectancy Model



"If I work hard, will I get the job done?"

"What rewards will I get when the job is well done?"

"What rewards do I value?"
